

# Technology & Engineering- Forensic Technology

## In-depth Guide

### Technology & Engineering – Forensic Technology

The group is part of KPMG Risk & Compliance Technology and specialises in the forensic capture and analysis of electronic media. Typical cases involve the capture of data from both computers and networks, and its analysis in support of the litigation and/or investigation. Part of the role will be to use forensic software applications and other bespoke tools for the forensic collection, analysis, review and production of evidence in support of client matters.

On a day-to-day basis you will work under the direction of senior management within the team. The nature of the work will include some out of hours work and overseas travel depending on the nature of the assignments.

#### Responsibilities:

- Assisting the Forensic Tech team with forensic disk imaging and the searches of imaged data as well as the publication of search results for analysis by the relevant investigation teams.
- The maintenance of imaging equipment and the management of electronic data to ensure that it is correctly stored.
- Helping with the production of data in various forms such as to CD and DVD.
- Assisting the team with the building of environments to allow for electronic data to be examined using specialist forensic tools.
- Undertaking product research for the team and asset with the maintenance of the computer forensics' evidence logs and databases.
- Telephone forensic examination.
- Support the investigation team in the preparation of charts and databases.
